TEXTBOOK

A Gentle Introduction to Optimization

B. Guenin
University of Waterloo, Ontario

J. Könemann
University of Waterloo, Ontario

and L. Tunçel
University of Waterloo, Ontario

Assuming only basic linear algebra, this textbook is the perfect starting point for a wide range of undergraduate students from across the mathematical sciences (computer science, engineering, economics, and so on). The authors focus on the fundamental ideas in

optimization and motivate the theory with real-world examples and exercises.

Contents: Preface; 1. Introduction; 2. Solving linear programs; 3. Duality through examples; 4. Duality theory; 5. Applications of duality; 6. Solving integer programs; 7. Nonlinear optimization; Appendix A. Computational complexity; References; Index.

An Introduction to Polynomial and Semi-Algebraic Optimization

Jean Bernard Lasserre
Centre National de la Recherche Scientifique
(CNRS), Toulouse

This is the first comprehensive introduction to the powerful moment approach for solving global optimization problems. Graduate students, engineers and researchers entering the field can use this book to understand, experiment with and master this new approach through the simple worked examples provided.
